# VEITCH'S PERPETUAL-FLOWERING CARNATIONS.

FEBRUARY, 1912.

These require greenhouse culture, except from June to September, when they grow better in an open position out-of-doors, where some protection should be afforded them against heavy rains. Stop the shoots early to produce bushy plants. For green-fly fumigate under glass, and syringe with insecticide in the open. Place the plants near the light and give plenty of fresh air. Winter temperature 55°, with dry atmosphere and ventilation whenever possible.

**A Good Potting Soil.**—Four parts fibrous loam, one part decayed manure, one part leaf-mould. Pot firmly and see that drainage is good.

**A.M.** = Award of Merit from the Royal Horticultural Society.

**HEALTHY PLANTS, WELL ESTABLISHED IN SMALL POTS FOR DELIVERY IN MARCH.**
